

The LearnAbility Project

4IR-Ready Adults \equiv Dignified Economic Miracle

Enhance Your AIQ! Make AI Work for You! Revitalise Your Future, Now!

You?

An open call to UPSC aspirants, BEd students and trainee teachers, and others stuck in low-quality or under-employed jobs. In fact, ALL young women and men struggling with unending, unaffordable, and unhelpful continuous coaching due to poor quality education in their years at school, beyond.

Youth!

In general, 'children-centricity' of a society is the best measure of its health, happiness, and hope. And, it is as true for the place of young adults in the society. It is an imperative that those in 20s are the most excited members of the society, about their present, future, and the nation as a whole.

Yearn!

India has to make good of its demographic dividend, and not go the way even the developed world seems to be sliding into – generational unemployment, poverty, boredom, indignity – identity crisis.

Yarn!

The story of AI-age is this - AGI (Artificial General Intelligence) has the seeds of being the Terminal 'General Purpose Technology' (TGPT) for humankind. The limitless capacity of human form is set to manifest, for EVERY adult; complemented, supplemented by AI. As such, it is the best times, ever.

Yard!

Fortunately, it is simple - the only bridge to be crossed, for ALL, is excellence in school-level mathematics; mathematise thinking, which hardwires brain to visualise, verbalise, and virtualise (abstract) quantitative relationships. No less, catalyse broader academic attainment.

This will assuredly rigourise and routinise learnability; autonomous, appropriate self-growth.

YES!!

To the point, The LearnAbility Project is launching 'Cent Percent Mathematics' that is the 'language of logic' we are born with, and it is the real mathematics (the language of the universe, science, technology, engineering.) School mathematics is NOT the language that is mathematics.

YOU will now excel in thinking mathematically, and using AI. You cannot fail, if you do not want to.

Augmented IQ (AIQ) (vs. 'Assisted IQ')

Mathematised Thinking is THE stepping stone for gaining the capability to use all form of AI outputs, such as ChatGPT texts, images, software codes, designs, videos, images, etc. and improvise them enough to make them your own! **We will help you master all of 'school mathematics' in 6 months!**

It must also be told that your current usages of AI are most likely what may be called 'Assisted IQ' where you mostly use AI outputs 'as is,' and that is to be avoided like a plague.

Get to Augmented IQ, and stay in the game, always! Build a new career, and a diversely rewarding one!

It is a zero-fee education! Has to be! A Gracious Society does that! Let us seed a gracious India!

Interest invited from other countries to support similar projects for youth. Sandeep@iycworld.net
